The best windshield wiper blades can help you see better under any weather conditions, but when it's time to replace your wiper blades, do you know which ones to buy? Beyond choosing the proper blades for your vehicle, you need to find the ones suited for your driving conditions. Check out this list of the best wiper blades on the market to help you discover the ones right for you. MORE FROM CONSUMERSEARCH.COM Windshield wipers are an important safety feature on any vehicle, and it's essential to keep them fresh and new. If it's time to replace your windshield wipers, you should measure and find the right size for replacement. Learn how easy it is with this guide. Measuring for Wiper Blade Replacements Windshield wiper blades are sized in inches. That inch measurement reflects the length of the rubber strip on the side that rests against the windshield and wipes water away. All you need to do to find your proper windshield wiper size is to remove the wiper and use a tape measure or another long measuring tool to measure from one end to the other on that rubber blade. If your measurement isn't a whole number, round to the nearest inch. So, for example, if you measure 17.25 inches, round down to 17. Repeat this process with both of your front windshield wiper blades. Why You Must Measure Both Sides Separately Why do you need to measure both blades? Because it's highly unlikely that they're both the same size. Windshield wiper blades are designed to provide maximum coverage of the windshield without obscuring the driver's view. This means that one blade is typically longer than the other. Some vehicles have a longer driver's side blade and others have a longer passenger's side blade. If you don't get the right size blade on just one side, the wipers probably won't work properly. So be sure to measure both blades and record the proper size in inches for each before shopping. Should You Use a Wiper Blade Size Finder? Tools that allow you to find wiper blade sizes by car are available, but they may not always be reliable. A wiper blade size finder tool may not, for example, account for differences between trim levels among the same make, model and year of the vehicle. Additionally, the information included in these charts and tools may be incorrect. It's a good idea to measure your blade to confirm this information. Since you likely want to take that step to make sure you're buying blades in the correct size, it may not be necessary to use one of these tools in the first place. As long as you know the right length in inches based on an accurate and careful measurement, you have all the size information you need. Rear Wiper Blade Replacement The process for replacing a rear wiper is much the same as replacing front wipers. The rear blade may be smaller than your front blades, and you may only need to measure for one rather than two, but that's the only real difference. Otherwise, measuring to confirm the correct size and finding the correct arm connection type works similarly with front and rear wiper blades. Factors to Consider in Addition to Size Size isn't the only characteristic of windshield wiper blades. Different wipers have different kinds of connectors that you'll need to match to get the right fit. If you aren't sure what kind of connector you have, go to a knowledgeable auto parts store or bring your proper windshield wiper blades into the store with you. MORE FROM QUESTIONSANSWERED.NET Meet our best wiper blades for 2013 Ford Focus vehicles. Includes 1 passenger side wiper blade that fits the 2013 Ford Focus wiper blade size oem requirements. These premium beam replacement 2013 Focus wiper blades easily wipe away rain, ice, snow, sleet, dirt and mud. We skip the traditional auto parts retailer by selling directly to our customers online for a lower price. Make Ford Model Focus Year 2013 # of wiper blades 2 Driver Wiper Blade Size 28 Inch Passenger Wiper Blade Size 28 Inch Connector Type I&L Windshield wipers are vehicle specific, so it's important to know the proper size before purchasing new wipers for your vehicle. Simple measuring or researching online will ensure you have the correct size wipers for your car. Measure the Length If you have access to a measuring tape, finding out the length of your windshield wipers is easy. Simply pick up the wiper, without removing it from the vehicle, and measure the length from the tip to the end. Make sure to measure both wipers, as some vehicles have differently sized wipers. The owner's manual is another option for quickly finding out the correct measurements for your windshield wipers. The owner's manual is specific to your car, so the size of wiper will be accurate. Search an Online Wiper Size Chart Many auto parts stores have online windshield wiper size charts so you can easily find out the right size for your car. One example is the rain x wiper guide that has you put in the make and model of your vehicle and quickly returns the right wiper size. If you're not good at measuring, or don't have your owner's manual, using an online wiper size chart is the best option. It's important to have accurate measurements to ensure proper coverage of the windshield. An online wiper chart will let you know the size for each wiper on both the driver and passenger sides so that you get the appropriate wipers. Choosing a Wiper Style The size of your windshield wipers isn't the only thing to consider when replacing your blades. The style of blade you choose determines how effective your wipers are at removing rain or debris from the windshield. Standard-style blades have a metal frame with rubber blade. This is the most commonly seen type of wiper blade and should be readily available in the size you need. Beam-style wipers are a little more expensive than the standard style. These wipers don't have the metal framework commonly seen on standard wipers but are, instead, one-piece construction. The blade itself is sometimes silicone or double-layered rubber. One other style to consider is a winter blade. These blades are often designed to protect the blade in a casing of some sort. This prevents the blade itself from freezing or being covered with snow or ice, allowing you to have full use of the wipers during cold, inclement weather. Replacing Windshield Wipers Replacing windshield wipers only takes a few minutes. Simply lift the wiper away from the windshield and detach the blade by pressing on the tab under the wiper. Pull the blade off of the wiper and slide the new blade on and push until you hear a click. Test your wipers by turning them on to ensure proper installation. Back Windshield Wipers Don't forget about your back windshield wipers. These aren't used as often as the front windshield wipers, but it's just as important to replace these regularly so they operate well. Check your owner's manual for the proper size or bring your vehicle buy any auto parts store and the technicians will be able to tell the size of your rear wiper. MORE FROM QUESTIONSANSWERED.NET
